New IFAC Journal: Annual Reviews in
Control

TRANSITION

Iakov Z. Tsytkin
1919 - 1997

Academician Iakov Z. Tsytkin was part of the IFAC control engineering community for many years. He served IFAC in many different functions. He was Chairman of the IFAC Technical Committee on Theory between 1978 and 1981 and served as Vice-Chairman of the Publications Committee in the current triennium. In 1984 he received the Quazza Medal, thus being the second recipient of this most distinguished IFAC award. In 1994 he became Chairman of the Russian National Committee of Automatic Control, the Russian NMO of IFAC.

Academician Iakov Tsytkin passed away suddenly and unexpectedly at the beginning of December 1997. All his friends and colleagues in IFAC will miss him dearly.

Real Time Programming

22nd IFAC / IFIP Workshop

Lyon, France, 15 - 17 September 1997

In recent years, the interest in all aspects of real time computing has increased significantly. This is not only due to accelerated research efforts undertaken in this area, but also to an expanding worldwide market for various types of real time computing systems.

The Workshop on Real Time Programming provides an opportunity to assess the state of the art, to present new results, and to discuss possible lines of future development. Its primary focus is on software development for real time systems and real time operating systems. The IFAC/IFIP Workshop on Real Time Programming has a tradition of more than 30 years, and is now conducted annually. As a truly international event, it is held in different parts of the world. This year the meeting was held in Lyon (France). It was organised by the Laboratoire d'Ingénierie de l'Informatique Industrielle (L3i) from the Institut National des Sciences Appliquées de Lyon. The workshop was financially supported by the Ville de Lyon, the Conseil Général du Rhône and the Région Rhône-Alpes.

The number of participants was almost in line with the original goal envisaged (42, twice the number of presented papers).

Method and Statistics of Paper Selection

Twenty one contributed papers were selected out of thirty-five submissions to the workshop.

The electronic submission of papers (full versions and not extended abstracts) was encouraged in order to facilitate and to the speed up the work of the International Programme Committee. The reviewing process was in most cases done by e-mail which allowed to reduce the time delay. Finally, most of the accepted papers, in their camera ready version, were also submitted by electronic mail, in PostScript.

The authors of accepted papers received an author kit, directly provided by IFAC, to format their papers. The regular proceedings are going to be published by Elsevier Ltd as usual, including the synthesis of the two forums and the abstracts of the keynote speeches.

The contributions came from Europe, North- and South America.

From the 35 submissions, 31 came from universities and 4 from Research Centres.

Each paper was reviewed by at least four referees (in most cases, there were five reviewers), who gave marks. The highest scoring 21 papers were selected for acceptance and assigned to presentation in seven different sessions. Of these 21 papers accepted for publication, 20 were from universities, and 1 from a research agency. There were 2 no-show papers.

Brief Summary of Programme and Discussion

The event's primary focus was on software development and methodologies appropriate for real time systems. The seven sessions addressed the subject areas:

- Architecture and Systems (2 sessions);
- Design and Applications;
- Object Oriented Approach (2 sessions);
- Timing Analysis and Scheduling (2 sessions).

This year, a particular accent was on object-oriented research in the field of real time programming. Thus, the program was shaped in such a way that two sessions on Object-Oriented Approaches were placed the second day. At the closing of this day, a forum, organised as an intentionally challenging/controversial discussion, was devoted to the Object Oriented Real Time Systems. After short statements by the panellists, an outstanding discussion took place among all the participants in the workshop. A second forum devoted to real time education took place the third day and was organised in the same manner and with the same aim: to obtain an outstanding discussion among all the participants in the workshop. This feature of introducing two forums was quite successful.

Numerous discussions took place in each of seven sessions, two forums, and during the breaks (the coffee breaks twice a day, and the 2-hour lunch break). In addition, the Workshop devoted ample time for focused discussions by inviting two Keynote Speakers, from the Industry World, to give talks on interesting topics:

- M. Philippe Hilsenkopf (France), Engineer, Expert of Framatome Group, Instrumentation and Control Department, gave an invited talk on Nuclear Power Plant I&C and Dependability Issue;
- Dr Eric Rutten (from IRISA / INRIA, France) presented a keynote speech on the SACRES ESPRIT approach to embedded systems applied to aircraft engines (project done in collaboration with SNECMA Industry and TNI).

IPC Chairman

Change of Editor-in-Chief: CONTROL ENGINEERING PRACTICE

As the first Editor-in-Chief of CEP, in 1992 I faced a huge challenge set by IFAC's Council to take the best of the applications material available to the Federation from its array of international events, and transform this into a viable, professional journal. More than just an archival publication, the journal had also to be attractive and useful to industrialists, academics and other researchers in the application of control engineering. Clearly, an extensive team would be required, and it was gratifying that within weeks we had more than enough offers of help. Contrary to my expectations, many of these came from industry; throughout these formative years almost half the Editors, Associate Editors and Reviewers have been industrially based.

Through the wonderful efforts of these people, in soliciting, generating and reviewing papers, there is no doubt that we have succeeded. This success has been especially notable in a climate in which the publishing industry is facing serious new challenges.

These first six years, however, have just seen the start of CEP, and much still remains to be done. In the light of both past successes and the many and varied future challenges, the Editorial Board of CEP has undertaken an intense review of where we are going, and how we are going to get there. The questions to be answered include:

- With the increase in the number of IFAC Affiliated Journals, and the increasing breadth of CEP, is our scope still valid?
- As the page count is limited by economic realities, much valuable material still has to be omitted. What do we do about this?
- The market is becoming increasingly weary of duplicate publications – is the often-encountered “re-cycling” of conference papers really acceptable?
- We are receiving an increasing number of directly submitted papers. What should the balance be between such papers and those derived directly from IFAC events?
- How do we distribute the editorial and review work – given the world-wide phenomenon that, in all sectors of employment, more is being expected of less?
- Finally, how do we respond to the electronic publishing era – where engineers and scientists increasingly expect material to be delivered directly to their desks?

To respond to these many challenges, and implement the strategy envisioned by our Editorial Board, I have firmly believed for some time that we were reaching the point where fresh leadership of CEP was becoming necessary. In addition to this, we need to find new ways of producing and managing the journal.

The first step in this process has come with the introduction of typeset copy from the first issue of 1998; we believe that CEP's growing status as an archival journal merits the best presentation possible! Working from authors' disks, Elsevier will relieve authors of the burden of final formatting and presentation. Final language editing can now be done after the technical content has been accepted,

speeding up the initial review process even further. Additionally, the journal is now being included in Elsevier's Electronic Warehouse.

Secondly, tight, centralised control has been necessary during the formative years, but the sheer volume of work is increasingly rendering this impossible. We envisage a gradual move to a more distributed structure, making fuller use of the skills and insights of our knowledgeable and experienced panel of editors. As part of this process, I had originally intended to stand aside as Editor-in-Chief at the Beijing Congress in 1999. However, this step has been accelerated by changes in my own career, which preclude me from involvement in outside publishing activities.

Naturally, I leave CEP with very mixed feelings. I was very honoured at being asked to undertake this pioneering task, and am delighted with what we have accomplished. I am extremely appreciative of the efforts of all our Editors, Associate Editors, and Reviewers. The help and guidance given by our publishers, especially through Michael Dawes, has been a constant source of support, and the amazing feats achieved by Maureen Morris and her helpers at IFAC Publications have been more than we could ever have expected. The team in Swansea has been superb, and the wonderful editorial and organisational work of my wife Sue, assisted by Joy Knight, has set a standard that will be difficult to follow.

But it is time for me to move on. I know that we have in place a superb and experienced team of Editors, Associate Editors and Reviewers, who will take the journal from strength to strength. Most of all, though, I am delighted that my friend and professional colleague, George Irwin, has agreed to take over as Editor-in-Chief. George and I have worked closely over the past years for CEP, as exemplified by his appointment last year in the role of Deputy Editor-in-Chief. We have also been involved together in other IFAC groups, as well as in local UK-based learned society activities. George enjoys an enviable international reputation for his practical, industrially relevant leading-edge research in control engineering, and I can think of few persons to whom I would be more happy to hand over the reins. As from 1st January 1998, therefore, all correspondence related to CEP should be addressed to:

Prof G W Irwin,

**Editor-in-Chief, Control Engineering Practice
Department of Electrical and Electronic Engg.
The Queen's University of Belfast
Ashby Bldg, Stranmillis Rd
Belfast BT9 5AH, UK**

**Tel: +44 1232 335 439
Fax +44 1232 663 992
email: cep@ee.qub.ac.uk**

Knowing the exceptional quality of all those involved, I have no doubt that CEP will continue its amazing growth, and will soon establish itself as the leading applied control engineering journal. I have been very privileged to be a part of this enterprise, and I wish George and his team the very greatest success in the future.

**Mike Rodd
Founding Editor-in-Chief, CEP**

WHO IS WHO IN IFAC

**Professor George Irwin
Editor-in-Chief
Control Engineering Practice**

George Irwin has a 1st class honours degree in Electrical & Electronic Engineering (1972) and a PhD in Control Theory (1976) from The Queen's University of Belfast, Northern Ireland. Returning to Queen's in 1980, he was awarded a personal chair in Control Engineering in 1989.

Current research interests, much of which is in collaboration with industry, include identification and control using neural networks, fuzzy neural systems and local model networks, with applications in the aerospace, chemical and electric power fields. He has over 200 publications, including 6 edited research books. Prizes awarded for journal papers include four IEE Premiums (1985, 1987, 1991, 1996) and the 1995 Honeywell Prize from the UK Institute of Measurement and Control (1995). He is a member of the Control & Instrumentation College of the UK Engineering & Physical Sciences Research Council.

Prof. Irwin is the current chair of the new IEE Control division and chairs the Northern Ireland Centre of the IEE. He is a Chartered Engineer, a Fellow of the IEE, a Senior Member of the IEEE and a Fellow of the Institute of Measurement and Control.

In addition to being Editor-in-Chief of Control Engineering Practice, Prof. Irwin serves on the International Editorial Board of the IEE Proceedings on Control Theory and Applications and has wide experience on the programme and organising committees of international conferences. He is active in two IFAC Technical Committees, 'Algorithms and Architectures for Real-time Control' and 'Fuzzy and Neural Systems' and is an executive committee member of the UK Automatic Control Council.

This Newsletter may be reproduced in whole or in part. We encourage reprinting in national and local automatic control periodicals.

Acknowledgement to IFAC would be appreciated.

* Newsletter Editor's Note: Due to the changes in the publications process for Control Engineering Practice, the previews for issues 1&2 cannot be published in this issue of the IFAC Newsletter

Papers from the January 1998 Issue

Editorial

Call for Papers - Special Issue on Control Methods
for Communication Networks
(V. Anantharam, J. Walrand)

Papers

Life-Extending Control of Mechanical Structures:
Experimental Verification of the Concept
(S. Tangirala, M. Holmes, A. Ray, M. Carpino)
Block Recursive Parallelotopic Bounding in Set
Membership Identification
(L. Chisci, A. Garulli, A. Vicino, G. Zappa)
Improved Software Quality through Improved
Development Process Descriptions
(C. Bunse, M. Verlage, P. Giese)
Adaptive Control of Continuous Time Systems with
Convex/Concave Parametrization
(A.M. Annaswamy, F.P. Skantze, A.-P. Loh)

Brief Papers

Terminal Sliding Mode Control for Rigid Robots
(Y. Tang)
Stochastic Analysis and Control of Real-time
Systems with Random Time Delays
(J. Nilsson, B. Bernhardsson, B. Wittenmark)
A Numerically Robust State-space Approach to
Stable Predictive Control Strategies
(J.A. Rossiter, B. Kouvaritakis, M.J. Rice)
Adaptive Internal Model Control: H2 Optimization
for Stable Plants
(A. Datta, J. Ochoa)
Optimal Controller Properties from Closed-loop
Experiments
(L.C. Kammer, R.R. Bitmead, P.L. Bartlett)
Identification and Model Reduction of 2-D Systems
via the Extended Impulse Response Gramians
(C. Xiao, V. Sreeran, W.Q. Liu, A.M.
Venetsanopoulos)
Alternatives to Monte Carlo Simulation Evaluations
of two Multisensor Fusion Algorithms
(C.W. Frei, L.Y. Pao)
Mappings of the Finite and Infinite Zero
Structures and Invertibility Structures of Gene-
ral Linear Multivariable Systems under the
Bilinear Transformation
(B.M. Chen, S.R. Weller)

Technical Communiques

Regulation and Tracking of the Nonholonomic
Double Integrator; a Field Oriented Control
Approach
(G. Escobar, R. Ortega, M. Reyhanoglu)
Global Asymptotic Stability of Indirect Field-
oriented Speed Control of Current-fed Induction
Motors
(L.U. Gokdere, M.A. Simaan, C.W. Brice)
H8 Control of Discrete-time Linear Systems with
Norm-bounded Uncertainties and Time Delay in
State
(S.-H. Song, J.-K. Kim)

Call for Papers Special Issue on Control Methods for Communication Networks

One of the most dramatic technological
developments of our times is the deployment of
communication networks such as the Internet and
local area networks. This networking revolution is
ongoing, and continues to raise fundamental
challenges for control and communication
engineers.

The control problems raised require new techniques
and formulations, in addition to the traditional ones
familiar to control theorists. Communication
networks are large complex entities which support
many agents and have to handle demands with a wide
range of quality of service (QoS) requirements.
Together with the commercial nature of the offered
services, this complexity brings to the fore problems
of a game theoretic nature among the interacting
agents, problems of how to price the services, of how
to decide when to admit connections, and more
generally how to provide and meet QoS guarantees
through routing, congestion control, and flow control.
The infrastructure of the network needs to be properly
designed, and requires the investigation of the
tradeoff between hardware cost and performance in
switches and routers, the development of efficient
scheduling algorithms, and the design of adaptive
control methods that use appropriate distributed
measurements of the current state of the network.
Multiple access problems need to be solved for both
wired and wireless systems.

The purpose of this special issue of Automatica is
to bring together research and/or tutorial papers
addressing the general theme of 'Control Methods
for Communication Networks'. Subject areas of
interest include:

- Applications of game theory and Markov
decision theory to communication network
problems
- Admission control, flow control, and congestion
control
- Power control and mobility management of
wireless networks
- Control for data compression
- Scheduling of switches
- Measurement-based control
- Control problems for satellite communications
- Pricing of network services.

Papers on other control problems in communication
networks not covered by the preceding list are also
welcome.

All submitted papers will be subject to peer review
as any other Automatica paper.

The timetable for the special issue is as follows:

Submission deadline: June 30, 1998
Expected publication date: December 1999

The special issue will be prepared by a team
consisting of two guest editors, Venkat Anantharam
and Jean Walrand (University of California,
Berkeley) and Automatica Deputy Editor-in-Chief
Tamar Basar (University of Illinois).

Prospective authors are invited to submit seven (7)
copies of their paper, prepared as per regular
Automatica guidelines to

New IFAC Journal Annual Reviews in Control

Dear Reader:

Elsevier Science has decided to convert its previous
title Annual Reviews in Automatic Programming
to Annual Reviews in Control.

Under the new title, this publication will contain a
broad range of review articles, covering all aspects
of the theory and application of control. The
majority of these articles will be drawn from the
most recent symposia, conferences and workshops
of IFAC, the International Federation of Automatic
Control. Those meetings cover every aspect of
automatic control and feature review papers written
by the most outstanding experts of the particular
field. We feel that we are providing a useful service
to the scientific community, and produce a valuable
publication, by printing a selection of those review
papers. In addition, we plan to invite experts to
write review papers, directly for the journal, on
subjects not sufficiently represented in the
conference materials.

Converting to the new arrangements has caused
some delay in the publication of the 1996 and
1997 volumes. From 1998 on, there will be one
issue each year, appearing in May.

Janos Gertler, Editor
Fairfax, VA USA

Offenlegung:

Das Medienwerk 'IFAC Newsletter' wird als Organ
der 'International Federation of Automatic Control'
(IFAC) verlegt und ist Eigentum dieser Internationa-
len Föderation, deren Tätigkeit der Förderung von
Wissenschaft und Technik automatischer Regelung
und Steuerung dient. Die Föderation hat ihren Sitz
in Zürich und ist nach Schweizer Recht als gemein-
nütziger Verein angemeldet. Sie verfolgt weder wirt-
schaftliche noch praktische Ziele.

Das Sekretariat der IFAC befindet sich seit 1978
aufgrund eines Übereinkommens mit der Österrei-
chischen Bundesregierung mit der Österreichischen
Akademie der Wissenschaften in Laxenburg.

Der 'IFAC Newsletter' erscheint sechsmal jährlich
in englischer Sprache unter der Redaktion des Ge-
neralsekretärs der IFAC, Dipl.-Ing. Dr. Gusztáv
Hencsey. Die Zeitschrift dient der Information über
die Aktivitäten der IFAC. Sie wird kostenlos an
Abonnenten in 50 Länder versandt. Die Kosten
werden von der IFAC aus Beiträgen der derzeit 48
Mitgliedsländer getragen.

Präsident der IFAC für 1996/99 ist Prof. Yong-Zai
Lu (VR China), Vizepräsidenten sind Prof. Vladimir
Kucera (CZ) und Prof. Rolf Isermann (D). Alle
Funktionen werden ehrenamtlich ausgeübt.
